BookletChartTM

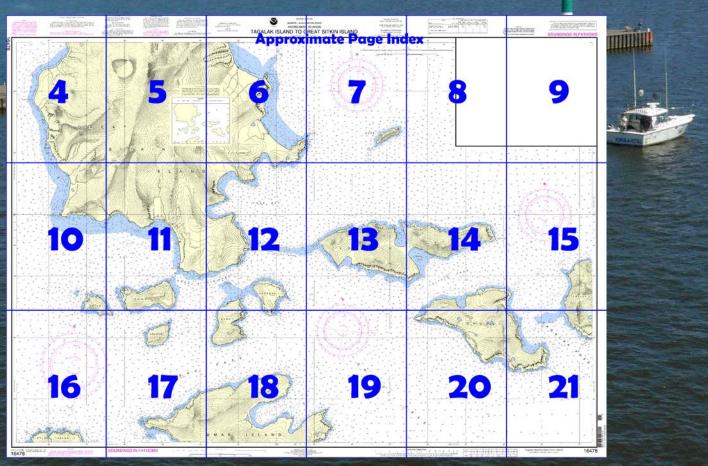

Tagalak Island to Great Sitkin Island NOAA Chart 16478

A reduced-scale NOAA nautical chart for small boaters When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA's Office of Coast Survey, the nation's chartmaker

Published by the National Oceanic and Atmospheric Administration National Ocean Service Office of Coast Survey

What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart[™]?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 78.

(Selected Excerpts from Coast Pilot)
Chugul Island is 4.5 miles long from NW to SE and 2.5 miles wide from N to S. The highest summit reaches 1,668 feet. There are several small lakes and streams on the island. The coast is generally steep and rocky, but there are indentations with sandy beaches at the heads. Cape Kagalus marks the SE extremity of the island. Igitkin Island, about 1 mile NW of Chugul Island, is 5.5 miles long and quite narrow. It is divided into two parts, connected by a

low isthmus about 0.3 mile wide.

Igitkin Bank, with depths of 1 to 10 fathoms, extends 2 miles W of **Igitkin Point**, the W extremity of the island.

Shelter Cove is a small cove opening on Igitkin Pass. It is not recommended as an anchorage due to its size, rock bottom, and its exposure to draw winds from N and S.

Igitkin Bight probably affords partly sheltered anchorage for small vessels; it is presumably subject to the same draw winds that prevail at Shelter Cove. It is about 0.8 mile long and has an entrance about 0.3 mile wide with black sand bottom. Depths inside range from 6 to 2 fathoms, but there are rocks and foul ground varying distances offshore. The bight is open to the N.

Igitkin Pass, separating Chugul and Igitkin Islands, is clear and deep and perhaps the best pass from the N and E to Kuluk Bay. It is 3.5 miles long and the navigable channel is about 0.5 mile wide at the narrowest point at the W end. A midchannel course of 248° leads directly into the pass N of Umak Island through which entrance into Kuluk Bay can easily be made. Tide rips have been reported between Kingfisher Point, on Igitkin Island, and the NW point of Tagalak Island, between Kingfisher Point and the E end of Chugul Island, and at the W end of Igitkin Pass. When the current is setting W through Igitkin Pass there is a strong S set near the W end of the pass.

Chugul Pass (see also chart 16460), between Chugul Island on the E and Anagaksik and Umak Islands on the W, is about 4 miles wide, and is deep and clear.

Next to Atka Pass, Chugul Pass, in combination with Asuksak Pass, is considered the best passage from the Bering Sea to the Pacific between Seguam Pass and Adak Strait. It is the best passage to Kuluk Bay from the SE. Prominent landmarks that can be used during the approach from S and E are the island of Anagaksik; Cape Azamis, the SE tip of Little Tanaga; the prominent, two-fingered pinnacle near the SE end of Chugul; and the conical-shaped island of Ikiginak. From a position 3 miles E of Anagaksik, a course made good of 303° will pass Cape Ruin, the NE tip of Umak, at a distance of 1 mile. From this point, making good a course of 263° will lead down the middle of Asuksak Pass, passing 1.5 miles off Cape Chakik, the W tip of Umak. Throughout Chugul Pass are strong tidal currents. In thick weather, dead reckoning is difficult because of these currents.

Ulak Island is about 2.3 miles E of Bugle Point, the E extremity of Great Sitkin Island, and about 2.5 miles N of Igitkin Island. It is a barren rock, about 0.9 mile long, 0.2 mile wide, and 675 feet high. Deep water is close to the island on all sides, except the SW point where rocks extend. Yoke Bay, on the SE coast of Great Sitkin Island, has three arms. The best anchorage of the three is the middle or West Arm; it is about 1,500 yards in extent and affords anchorage in about 20 fathoms. The bottom is sticky hard mud, affording good holding ground. Limited anchorage space is available in both North Arm and South Arm. The bay is subject to williwaws, but their effect is not serious on ships equipped with good ground tackle. Yoke Bay is open to swells from the Pacific Ocean from the SW, although they are somewhat broken in their approach by nearby islands; it is entirely open in a NE direction to the Bering Sea. Great Sitkin Pass is between the S peninsula of Great Sitkin Island and the islands of Igitkin, Tagadak, Kanu, and Tanaklak. The pass has depths of 7 fathoms or more. Between **Zaliva Point** and **Passage Point** currents of 2.5 knots have been observed and greater velocities are to be expected. Yoke Pass is at the N entrance to Great Sitkin Pass, between Igitkin Bank and Rip Point. Because of tide rips, currents, and the frequent changes of course required, Great Sitkin Pass is not recommended.

ISLAND

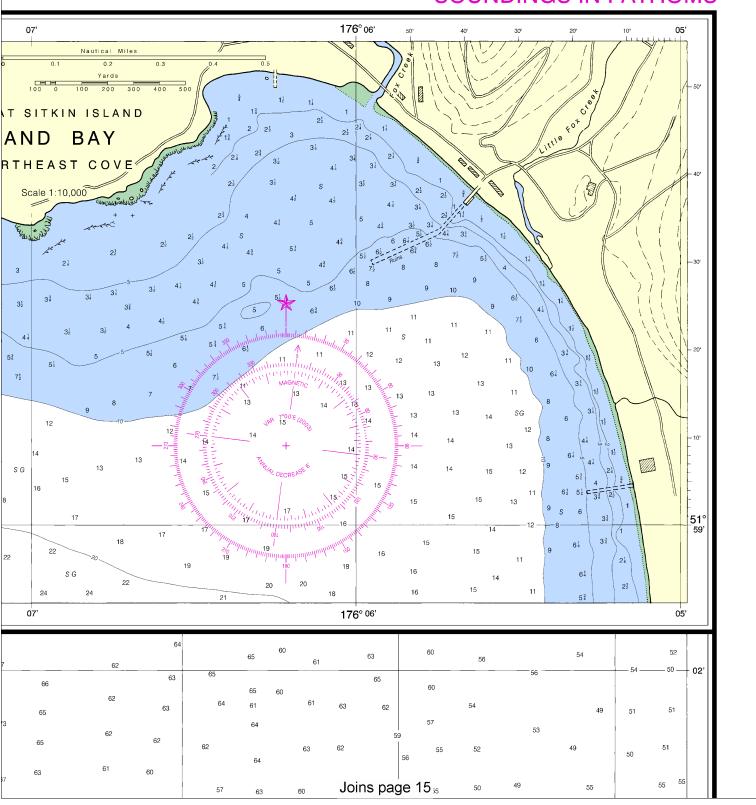

m of soundings (MLLW) -3.0 -3.0

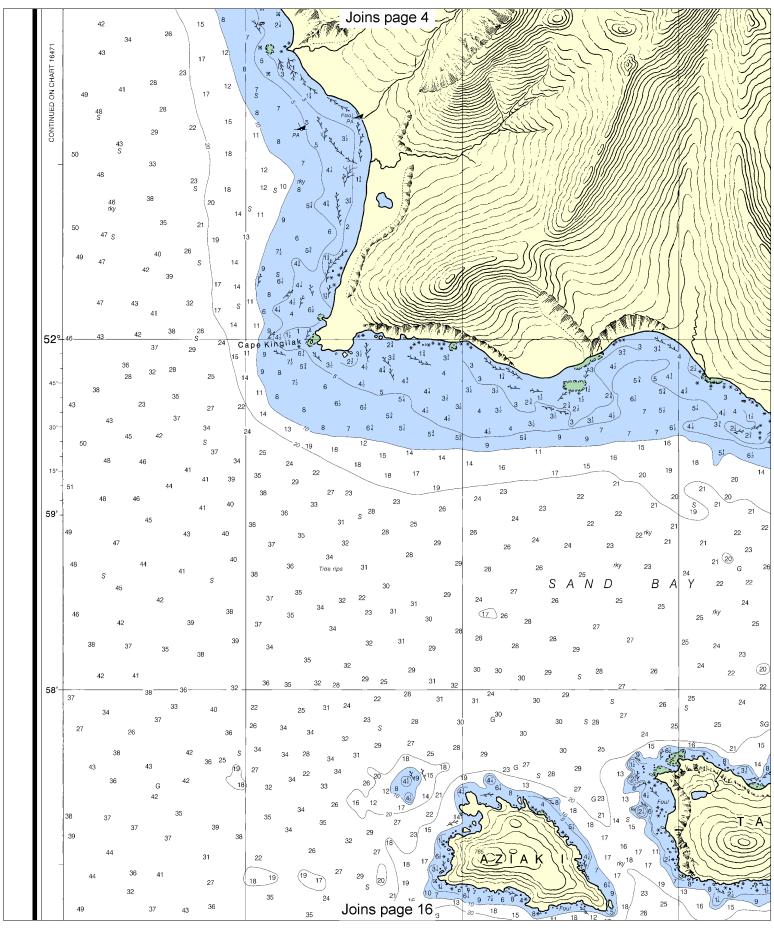

Extremely heavy tide rips and strong currents which at times make control of a vessel difficult may be encountered in the passages between the Pacific Ocean and the Bering (See Tidal Current Tables for Supplemental Information).

NOTE B

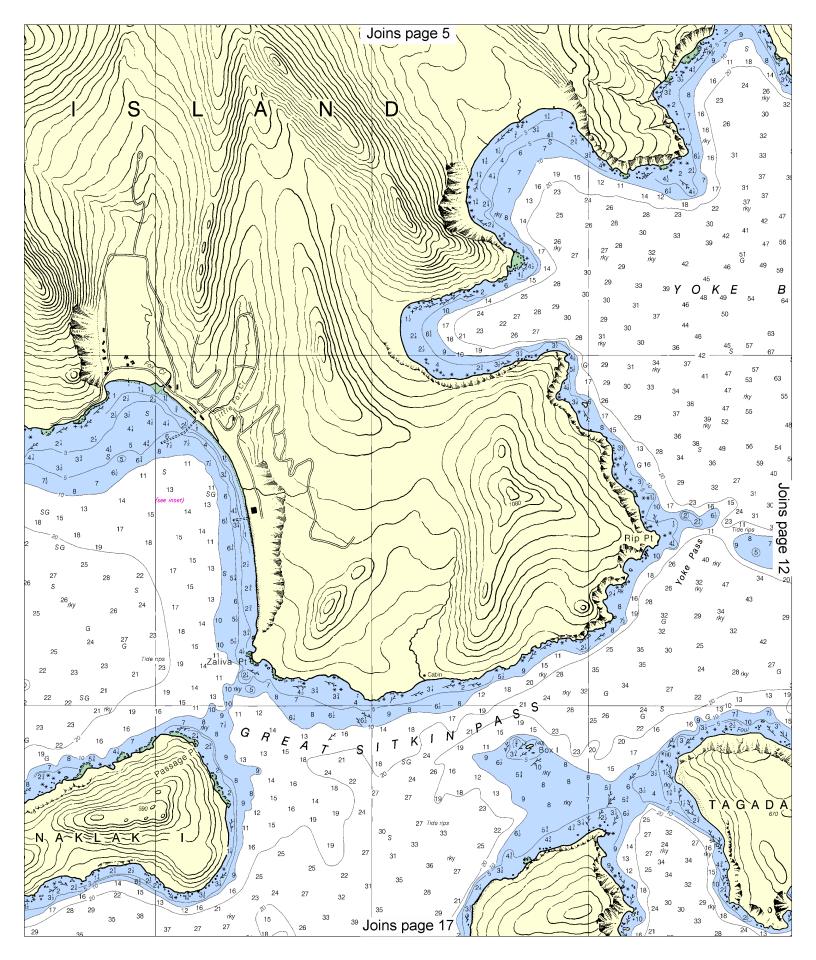

This nautical chart has been designed to promote safe navigation. The National Ocean Service encourages users to submit corrections, additions, or comments for improving this chart to the Chief, Marine Chart Division (N/CS2), National Ocean Service, NOAA, Silver Spring, Maryland 20910-3282.

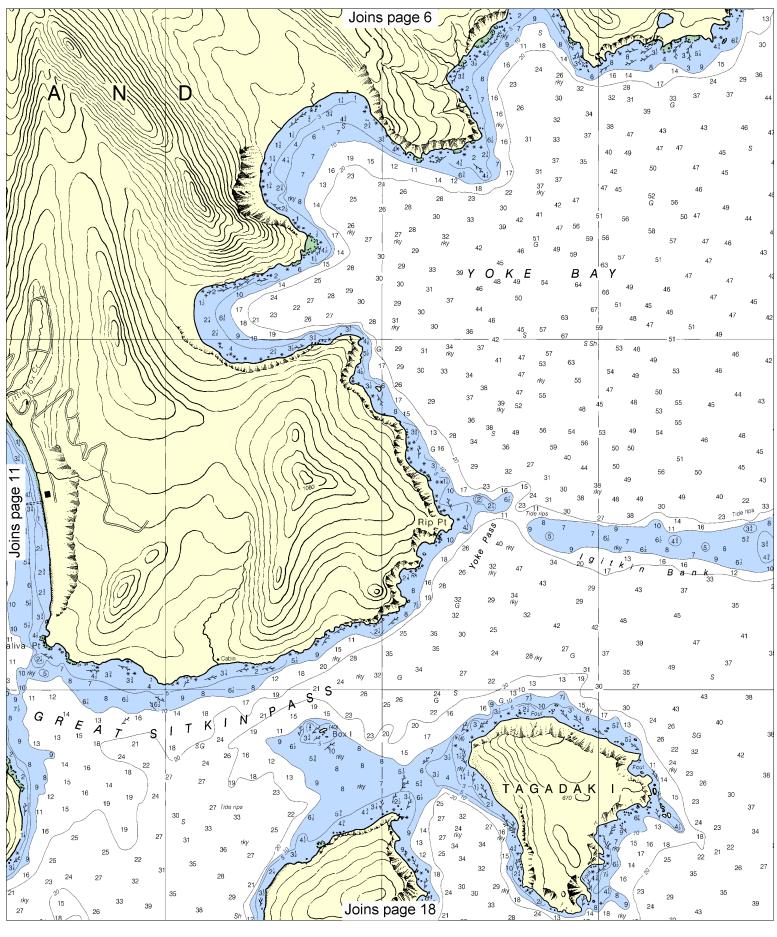

SOUNDINGS IN FATHOMS

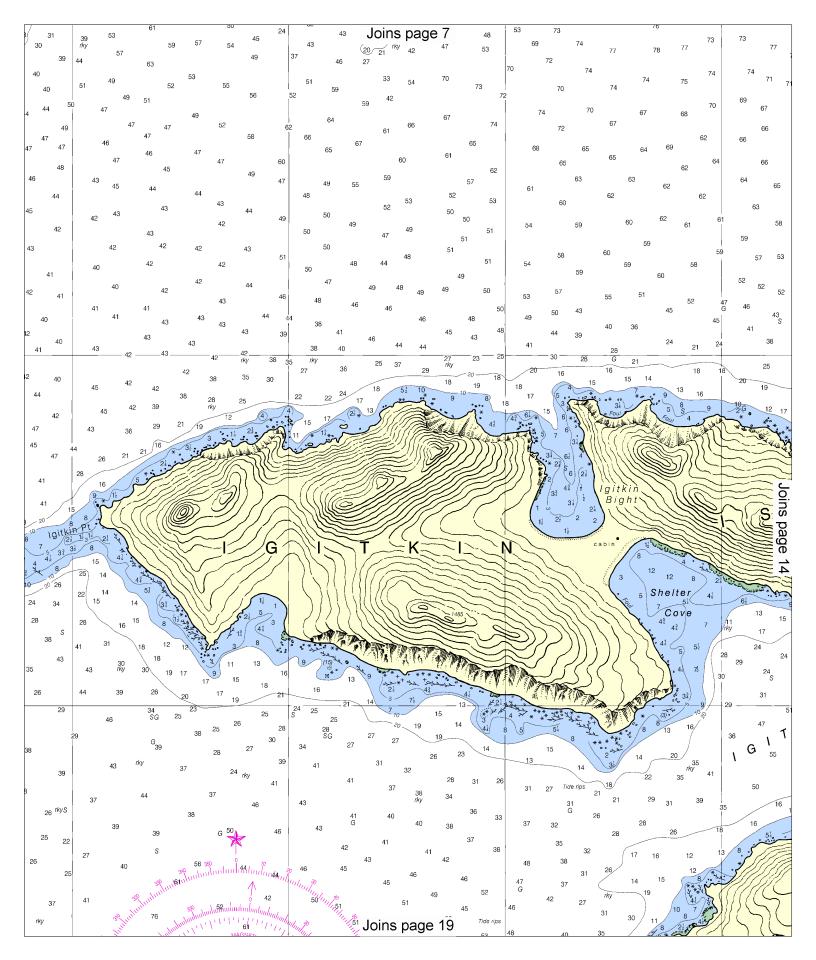

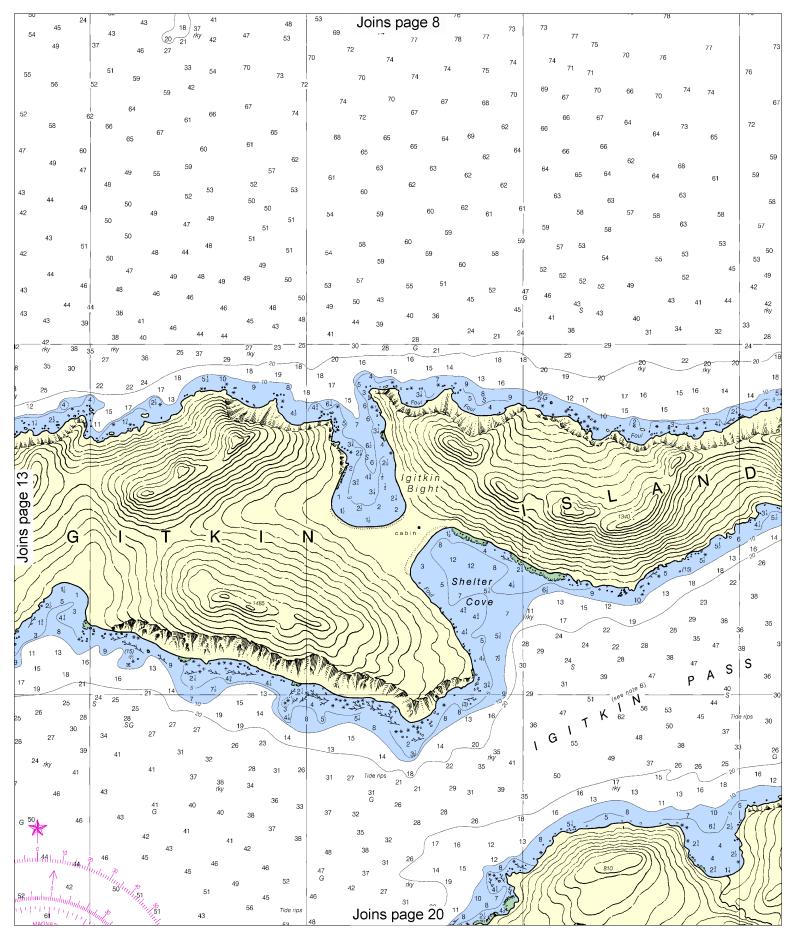

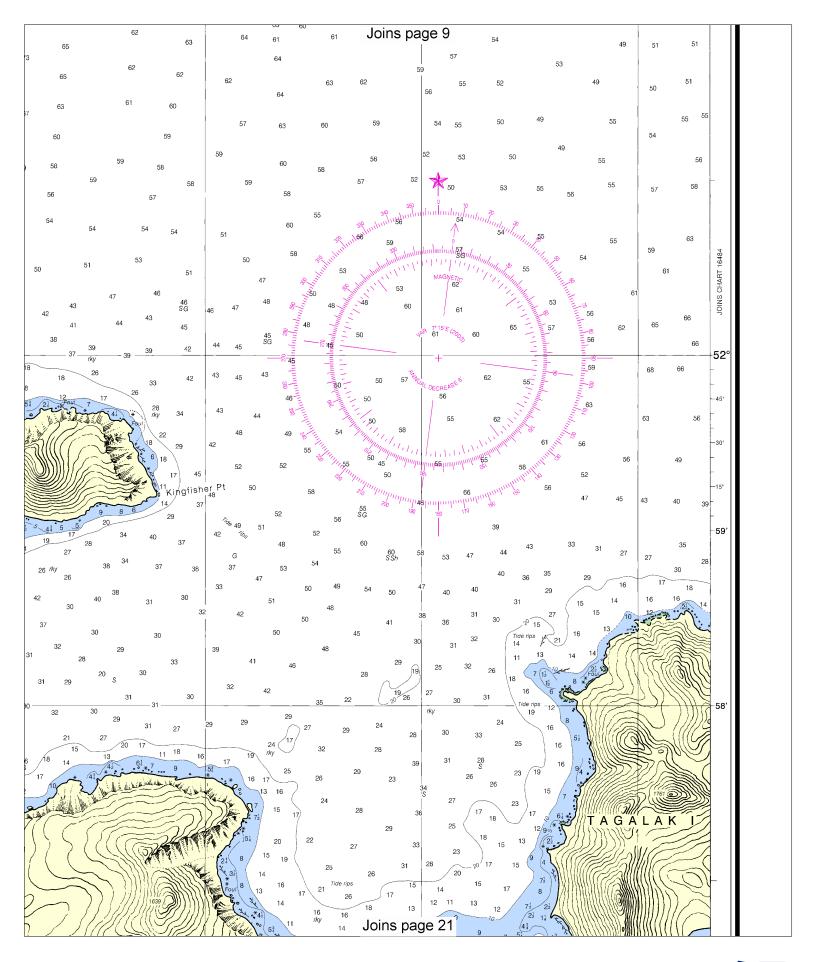

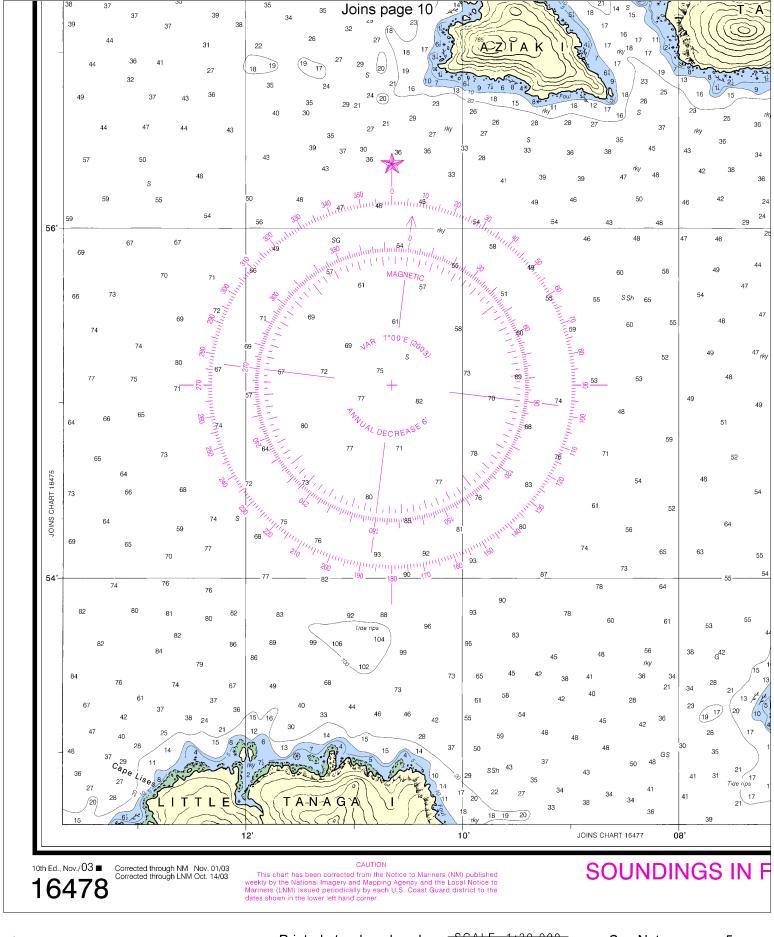

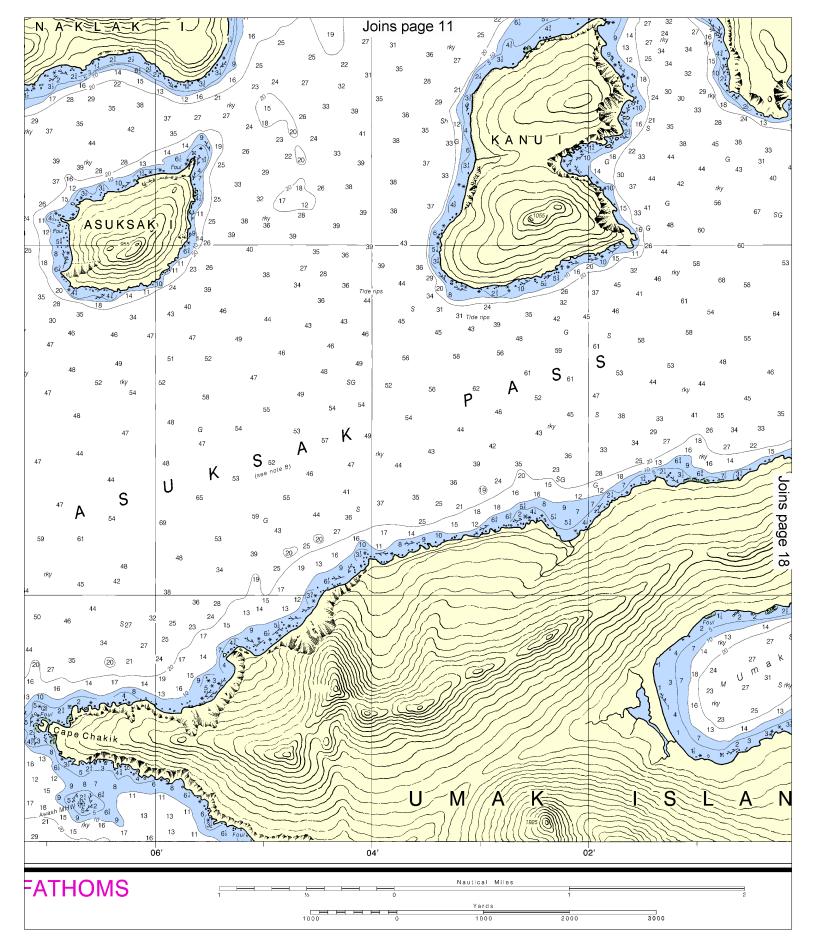

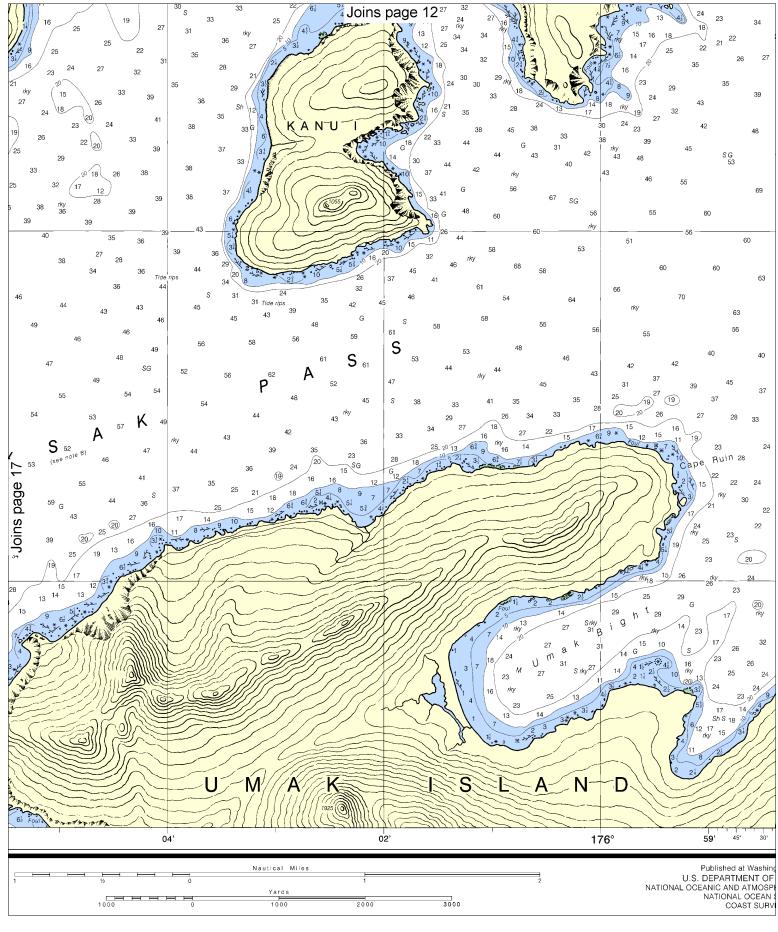

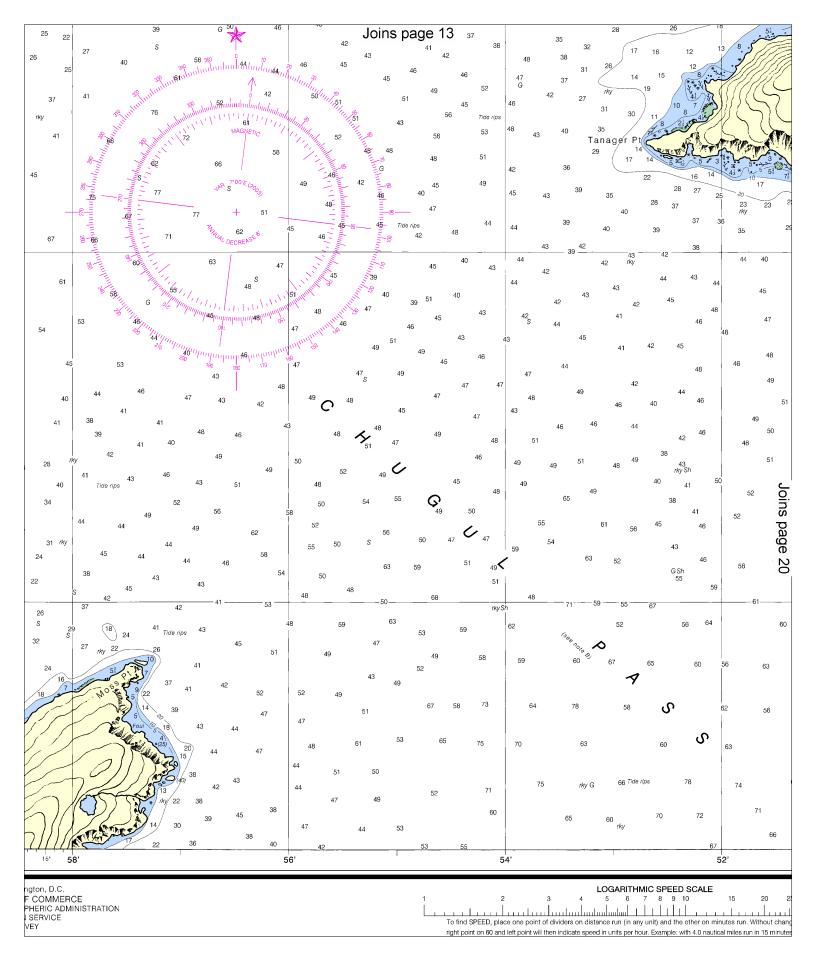

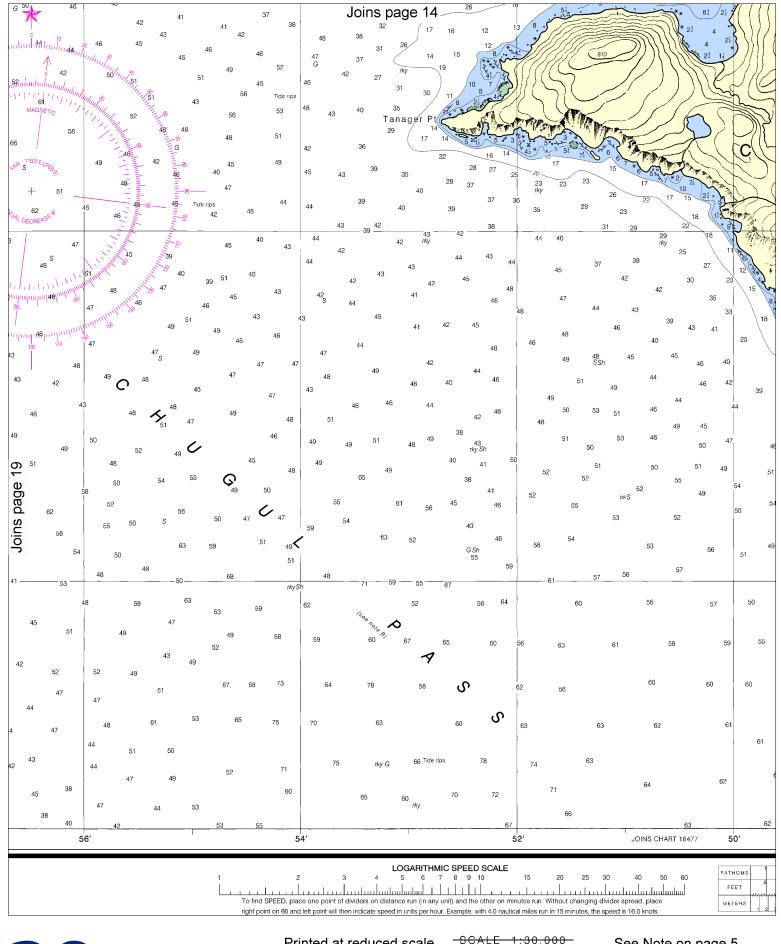

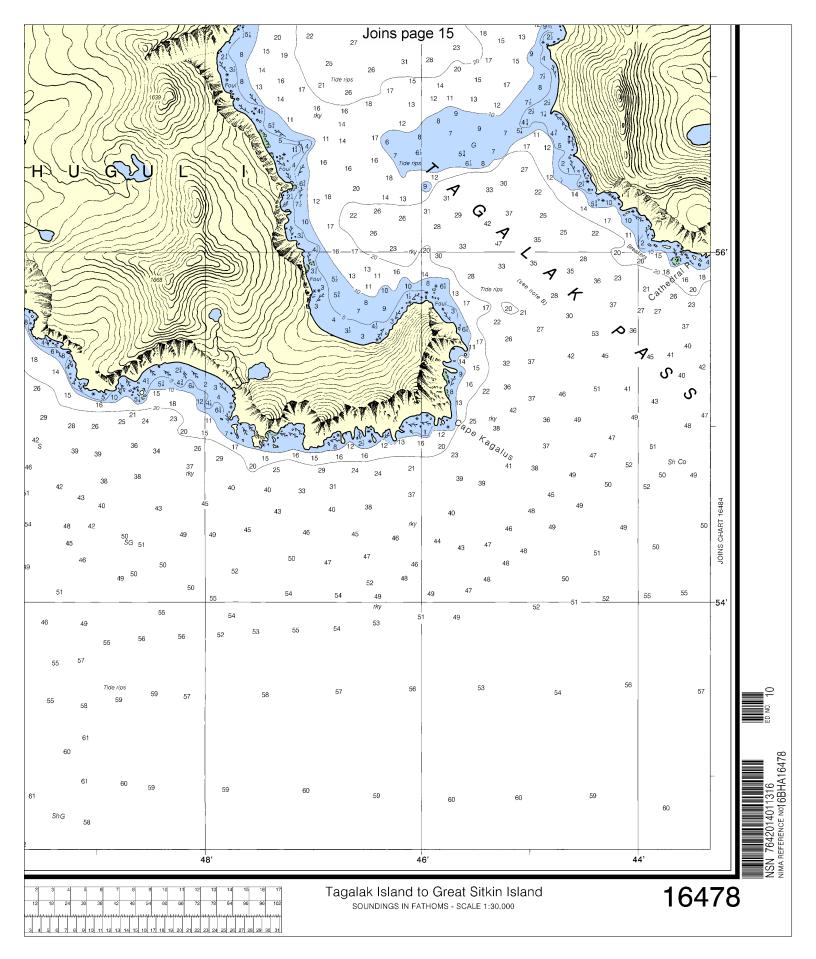

VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

Distress Call Procedures

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
